PROFESSIONAL SUMMARY

Backend Software Engineer with **2+ years** building high-reliability checkout and payment systems on **Java microservices**. Built a checkpoint-resumable checkout handling **~25K orders/month** at **99.57%** payment-to-order completion and **PayU + Razorpay integrations** on a gateway serving **~563K payment orders/month**, with deep focus on **idempotency, reconciliation** and **event-driven architecture**.

WORK EXPERIENCE

Software Development Engineer 1 – Backend (Java) | Full-time + Internship

Jan 2024 - Present

Standard Chartered Research and Technology (Solv)

Bengaluru, Karnataka

• Checkout Platform

- Scaled checkout to **~25K orders/month** at **99.57% payment-to-order completion** by building an 11-state, checkpoint-resumable state machine across 5 microservices, with zero double-charges on retry.
- Eliminated duplicate orders from app/webhook races using DynamoDB conditional-write idempotency, and launched a config-driven prepayment rules engine, enabling business teams to ship policy changes with zero deploys.
- Enabled UPI + JumboCash split payments (**~32K sessions/month, 99.1% success**) through per-item attribution and pro-rata advance allocation, providing each order item with an exact balance due at delivery.

• Payment Gateways – PayU & Razorpay

- Integrated PayU and Razorpay behind a Strategy/Factory gateway abstraction serving **~563K payment orders/month** at **99.56% success**, allowing new gateways to ship as one strategy class with no caller changes.
- Hardened payment completion to **99.8% success** with Redis distributed locks, backoff polling, and deferred capture, plus an audit-first idempotent S2S webhook pipeline that blocks late or duplicate callbacks.
- Built stuck-transaction reconciliation with ± 1 -paise amount checks, P0 alerting, and a Cashfree failover circuit breaker, keeping delivery-time collections live through gateway outages.

• Kafka → AWS SQS/SNS Migration

- Migrated payment and credit event streams from Kafka to AWS SQS/SNS with zero downtime using percentage-based canary routing (**10–20% → 100%**) with automatic Kafka fallback, enabling config-only rollback.
- Moved a **~800K messages/month** reconciliation pipeline onto SQS at **99.94% consumer success**, using FIFO queues with message-group ordering and preserved idempotency headers.

• Profile Update Platform

- Architected a self-service, auditable KYC and profile-correction platform across 9 services on DynamoDB with append-only audit and batch-idempotent transactions, replacing the credit team's manual spreadsheet backlog.
- Designed non-destructive profile write-back and review batches that fit well within DynamoDB's 100-op transaction limit (**~4–7 ops per 50-image review**), keeping GST invoicing correct for every corrected shop.

• Security

- Led a team of 5 to eradicate hardcoded secrets and git leaks across the organization using gitleaks and entropy scanning, migrating credentials to AWS Secrets Manager and Ansible Vault with zero production impact.

Technologies / Skills Used : Java 8, Spring Boot, Dropwizard, Hibernate, REST APIs, MySQL, PostgreSQL, DynamoDB, Redis, Kafka, AWS SQS/SNS, Mockito, Datadog

PROJECTS

ConnectHub – Microservices Backend | 🌐 Github

- Built a social networking backend of **6 microservices** with Eureka discovery, an API Gateway with JWT validation, and Kafka-driven async notifications for fault-tolerant, independently scalable services.
- Applied polyglot persistence (**PostgreSQL + Neo4j graph**) with Database-per-Service and OpenFeign, containerized end to end with **Docker Compose** for one-command setup.

Technologies / Tools Used : PostgreSQL, Neo4j, Kafka, JWT, Eureka

SKILLS

Databases :	MySQL, PostgreSQL, MongoDB, AWS DynamoDB, Redis, Neo4j
Frameworks & Libraries :	Spring Boot, Dropwizard, Spring Security, Spring Data JPA, Hibernate, Eureka, OpenFeign
Programming Languages :	Java, C++, SQL
Tools & Platforms :	Docker, Maven, Git, Ansible, JUnit, Mockito, Postman, Swagger, Datadog

EDUCATION

Lovely Professional University | Jalandhar

Oct 2020 - Jul 2024

B.Tech in Computer Science and Engineering with specialization in ML and AI

CGPA : 9.02/10

AWARDS & ACHIEVEMENTS

- Global Rank 8** in CodeChef January Long 2022-II (15K+)
- Global Rank 110** in CodeChef Cook-Off 2022 (12K+)
- 3-Star** on CodeChef
- Pupil** on Codeforces
